Presentation

About me.

I'm french, I'm 33 years old and I have about 10 years experience. I mainly work with web technologies but during my studies, I instead used low-level languages such as C, C++ and a little bit of Java.

I started to make some websites at the beginning of 2000's. I used various web technologies which allow me to have a rather broad vision of what is possible to do in a browser.

Today, I mainly use Javascript and Python at work and I'm particularly focused on new Javascript technologies.

Introspection.

I love to learn and challenge myself. I'm constantly seeking new ways to produce simpler and better. I love clean, small and powerful code.

But I know to be pragmatic when the situation requires it and not be too stubborn. I know how to question myself and I willingly accept criticism.

I like open and honest discussions, to imagine things with people, to share feelings, to feel that people trust me and to know I can count on them.

My MBTI psychological type is [INTJ](#).

Education

Master of computer sciences

2005

3il / Limoges, France

3 months of additional studies and 9 months of internship.

« CS2i »

2004

3il / Limoges, France

IT generalist School.

« BTS » Industrial Computing

2002

High school « Léonce Vieljeux » / La Rochelle, France

Computers and Electronics.

Experience

Gandi SAS

2008-current

Lead front-end engineer

Gandi is a French registrar and also offers hosting services.

At the beginning, I developed the website (PHP, Zend Framework) of the Millenium team (a big gaming team in France) which was a project supported by Gandi.

After 6 months, I joined the core web team and I worked several years on the Gandi website (Perl, Catalyst). Every day, I have to understand the product requirements in order to imagine technical solutions with the backend teams.

Since several months, we have switched on a Javascript/Python stack which allows me to play with modern technologies.

I must to be pragmatic to maintain the legacy softwares and imaginative to develop future versions.

Cerealog

2005-2008

Web developer

Cerealog is a software engineering company.

When I was in Cerealog, I rather used Microsoft technologies but quickly, I was asked to take over websites developments. During this period, I have developed a PHP framework which was used during several years.

In 2007 and 2008, I was responsible for the Francofolies website (famous music festival in France). I managed the hosting platform and the full development of the website including the online ticketing system, the news pages, the backoffice, etc.

Intelligence

2001

Web Development Apprentice
