PRESENTATION

I'm french and I have about **10 years experience**. I mainly work on web technologies although during my studies I worked on low-level languages such as C and C++ and a little bit of Java and .NET.
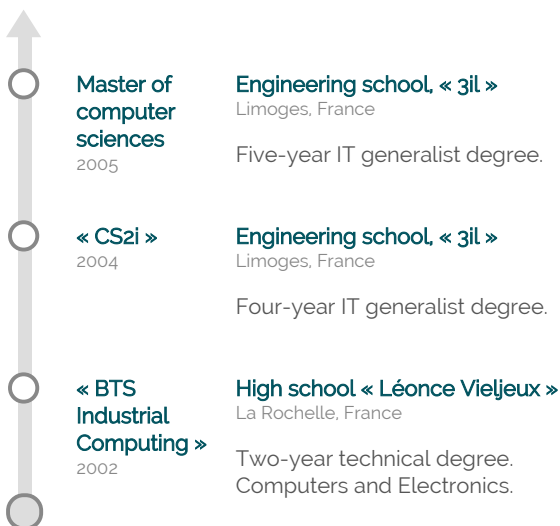

I started to make some websites at the beginning of 2000's. **I used various web technologies** which allow me to have a rather broad vision of what is possible to do in a browser.

Today, **I mainly use Javascript, Python and Perl under Linux environment**. I'm particularly focused on new Javascript technologies and the new ways to build single-page web applications.

EXPERIENCE

Gandi SAS
2008-current

Lead front-end engineer

Gandi is a French registrar and offers hosting services.

When I arrived, I worked on the website (PHP, Zend Framework) of the Millenium team (a big gaming team in France). Then, I quickly joined the frontend team and after several years, I became the main technical supervisor of the Gandi website.

Working at Gandi implies to well know the whole technical stack and not only the frontend side. Every day, I understand the product requirements in order to find technical solutions with the backend teams.

I am bringing innovations to develop the future versions and my pragmatism to maintain the legacy softwares.

Cerealog
2005-2008

Web developper

Cerealog is a software engineering company.

When I was in Cerealog, I rather used Microsoft technologies but quickly, I took over websites developments. For this period, I developed a PHP framework which was used during several years.

In 2007 and 2008, I was responsible for the Francofolies website (famous music festival in France). I managed the hosting platform and the full development of the website including the online ticketing system, the news pages, the backoffice, etc.

Intelliance
2001

Web Development Apprentice

EDUCATION

Master of computer sciences
2005

Engineering school, « 3il »
Limoges, France

Five-year IT generalist degree.

« CS2i »
2004

Engineering school, « 3il »
Limoges, France

Four-year IT generalist degree.

« BTS Industrial Computing »
2002

High school « Léonce Vieljeux »
La Rochelle, France

Two-year technical degree.
Computers and Electronics.

LATEST COMMITS

Mockify
github.com/Gandi/mockify

node.js / AngularJS / sqlite

Mockify is the API mocking made easy.

Mockify allows to proxy REST API(s) and save everything that passing through it. Then, you can stop the proxy and start a mock that will serve the saved data.

It provides a cli, a webapp and runs as a daemon process.

Keep simple CMS
github.com/cr0cK/keepsimple.cms

Python (Pyramid)

Because every CMS are complicated.

What's about a CMS with only 4 tables? This is what I tried to do within this little project built over Pyramid. I define « a node » as a piece of HTML and all pages are built recursively from these nodes.

A small website is using it: ascliberte.fr.

CaliOpen
github.com/CaliOpen/caliopen.ng

AngularJS / Python (Pyramid)

CaliOpen is an ambitious project whose the goal is to raise awareness about emails security.

I developed a proof of concept of a webapp to show the possibilities of what it is possible to do.
